

# CLOUD BACKUP COMPARISON

Reliable and easy to use backups are an essential part of any IT strategy. That's why it's important to review all available Cloud Backup options to determine which is best for your needs. We've selected three popular Cloud Backup solutions, including the [ServerMania Cloud Backup](#) to help you make an informed choice.

## **SERVERMANIA CLOUD BACKUP**

The [ServerMania Cloud Backup](#) is a complete backup solution. In just three clicks, users can create a backup plan and backup data on dozens of different devices types. It's designed to be the easiest to use backup platform as users do not need to configure backups using complex control panels or manage any backup servers. It's an all in one solution for businesses that don't want to waste time managing backups. Cloud Backup is billed at one flat monthly rate, with no per device costs.

## **R1SOFT**

R1Soft is a popular cloud backup platform that has been trusted by the hosting industry for many years. It's a stand alone piece of software which users install and configure on a server of their choice and then backup devices to an FTP storage node or another Cloud Backup platforms. This process is more time consuming to configure, but may be appropriate for businesses which need to backup large amounts of data. There is a \$14/month fee per device, plus the costs of backing up data and any associated servers.

## **MSP 360 (CLOUDBERRY BACKUP)**

Cloudberry Backup is a hybrid option for those wanting to avoid hosting the Cloud Backup software on their own servers but want to backup to an external cloud like AWS or BackBlaze. Similar to R1Soft, this option allows you to reduce storage costs by backing up to a cheap cloud option such as AWS Glacier, but it does have an expensive per device cost up to \$149 per server.

## COMPARING THE OPTIONS

	ServerMania Cloud Backup	R1Soft	MSP 360 (Cloudberry Backup) Using BackBlaze
Price Per Server Agent	Unlimited Servers Included	\$14/month/device	\$79.99 per Linux server, one time fee
Monthly Fee	Starting at \$35/month for 250GB storage	No storage included. Need to configure a dedicated server with adequate storage	No storage included. Need to setup storage account with BackBlaze or AWS.
Ease of Setup?	Simply install the agent and add to the control panel.	Need to setup and configure a dedicated storage server and connect storage with FTP or use Amazon Glacier storage.	Need to manually configure all backup operations via command line, then configure control panel.
Experience Needed to Setup	Beginner	Intermediate	Advanced
File Restoration Time	Fastest Recovery Time	Standard Recovery Time	Standard Recovery Time
File Redundancy	Data is automatically copied across redundant storage nodes.	No data redundancy by default. Would need to configure backup storage nodes for FTP backup.	Data is automatically copied across redundant storage nodes.
Complete Solution?	Yes	Control Panel and Storage are separately configured and maintained.	Control Panel and Storage are separately configured and maintained.

## COMPLETE AND RELIABLE

ServerMania Cloud Backup is an easy-to-use server cloud backup solution based on cutting-edge technology from Acronis. Providing you with the tools to quickly and easily set up automated backups, so you can rest easy knowing your data is safe.

### Easy to Manage

An intuitive control panel allows you to quickly and easily add or manage cloud backup activities. Cloud storage can be managed, backup plans can be configured, and files can be restored at the touch of a button.

### Flexible

Deploy on a single server or across hundreds of devices instantly. You can choose how and when servers back up to cloud as well as what files are stored and how long files are retained.

### Secure

Encrypt data in-flight and at-rest with AES-256 encryption and 2048-bit SSL. Files are securely transferred between the server and our cloud backup solution.
